Re: Expanded Site Inspection (ESI) Report  
Pullman Factory  
ILD 981 959 208

Dear Sirs:

On August 13, 1993, PRC Environmental Management, Inc., under a contract to the U.S. Environmental Protection Agency (U.S. EPA), performed a ESI at your facility. The ESI is part of the assessment process that a site goes through under the Comprehensive Environmental Compensation and Liability Act commonly known as Superfund. The assessment process is to determine whether hazardous substances are being release to the environment, and to determine if specific targets have been impacted.

The report was reviewed by the U.S. EPA and the Ohio Environmental Protection Agency, and is being forwarded to you for your information. The enclosed report includes site descriptions, a summary of analytical data for field samples, topographic information, site specific maps, and photographs. The U.S. EPA has in its files the raw analytical data for the field samples which can be made available to you upon submittal of a Freedom of Information Request, if you wish to perform an independent review of the data.

This completes the ESI phase of our investigation. If further work is required at the site in the future, you will be contacted. If you have any comments, please forward them to me in writing at the address on the letterhead or call Sonia Vega, of my staff, at (312) 886-7191.

Thank you for your cooperation.

Sincerely yours,

William D. Messenger, Chief  
Site Assessment Section
